Why Use PCCA Naltrexone?

- PCCA's chemical, #50-4377, is **Naltrexone Hydrochloride USP Anhydrous**, exactly in line with the USP monograph
- **You get more for your money per gram with the anhydrous form PCCA sells.** Other vendors are selling an imported, hydrous form of naltrexone hydrochloride, which requires, on average, using 6-9% more powder per prescription to account for the water and assay variances. Additionally, the dihydrate form may contain up to 11% solvents per USP (vs. maximum of 5% in our anhydrous). Calculations must be done for each prescription to adjust appropriately.
- **FDA-registered & cGMP**
